

## **IN THE SPECIFICATION:**

Please amend the first three paragraphs on page 9. The first paragraph begins with the phrase “A double foot switch 6 for instructing driving of the ultrasonic output device 2 is connected to the ultrasonic output device 2”. The three paragraphs should be amended as follows:

A double foot switch 6 for instructing driving of the ultrasonic output device 2 is connected to the ultrasonic output device 2, and control of the ultrasonic vibration output of the ultrasonic output device 2 is performed by input of instructions from the double foot switch 6 via pedals 6a and 6b where the two pedals 6a and 6b can have different output values and, therefore, can control two different functions.

A triple foot switch 7 for instructing driving of the water-supply/suction device 3 is connected to the water-supply/suction device 3, and driving control of water-supply/suction of the water-supply/suction device 3 is performed by input of instructions from the triple foot switch 7. The triple foot switch includes three separate pedals 7c, 7d, and 7e. Water feed pedal 7d controls the output of the water supply 3, and suction pedal 7e controls the output of the suction device 3. Pedal 7c can control the output of the ultrasonic output device 2

Note that input of driving instructions of the ultrasonic output device 2 can be [[made]] controlled either from the double foot switch 6 or the triple foot switch 7 via pedals 6b and 7c.

Please also amend the paragraph on page 10 that begin with the phrase “Upon input of driving instructions from the triple foot switch 7” as follows:

Upon input of driving instructions from the triple foot switch 7, the water-supply/suction device 3 supplies water and suction from the tip of the ultrasonic suction treatment equipment 11 via the water-supply/suction tube 15. This water feeding and suctioning action is performed by operating a water feed pedal 7d and suction pedal 7e, not shown in the drawings, which are provided on the triple foot switch 7, thereby supplying cleaning fluid to the body tissue, and recovering and suctioning the cleaning fluid following cleaning the body tissue as well as the crushed body tissue and the like.
